

What is claimed is:

1. (Currently amended) A method of visually encoding the astrological data of an individual, said method comprising:
graphically representing a first astrological datum of said individual with a circular area of a first color;
graphically representing a second astrological datum of said individual with a circular annulus of a second color,
the inner circumference of which is equal to or greater than the circumference of said circular area;
graphically representing a third astrological datum of said individual with a second circular annulus of a third color, the inner circumference of which is equal to or greater than the outer circumference of said second circular annulus;
wherein said circular area of said first color lies geometrically within the inner circumference of said first circular annulus, and the outer circumference of said first circular annulus lies within the inner circumference of said second circular annulus, forming a composite astrological symbol;
affixing said composite astrological symbol to such individual and/or to textual and/or photographic personal data concerning such individual to facilitate rapid assimilation of said astrological information by persons viewing said graphical and or textual information.

A color identification system of at least three concentric circles based on astrological signs comprising:
creating a color code chart for astrological signs using birth data information to determine the astrological sign of the moon at the time and place of an individual's birth and assigning the moon sign a color from the color coded chart;
using birth data information to determine the astrological sign of the sun at the time and place of an individual's birth and assigning the sun sign a color from the color coded chart;
using birth data information to determine the astrological sign of the ascendant at the time and place of

~~an individual's birth and assigning the ascendant a color from the color coded chart; creating a color form of three concentric circles where the color from the moon is a first concentric circle; where the color from the sun is a second concentric circle; and where the color from the ascendant is a third most concentric circle.~~

2. (Currently amended) An article of clothing identifying the astrological data of an individual, said article of clothing comprising a circular area of fabric of a first color, surrounded by a first circular annulus of fabric of a second color, surrounded by a second circular annulus of a second color, wherein the colors of said circular area and said first and second annulus are chosen from the set of colors consisting of: red, light green, bright blue, silver, yellow, dark green, light blue, black, orange, brown, dark blue, and lavender. ~~A color identification system based on astrological signs as claimed in claim 1 wherein the first concentric circle is an inner circle, the second concentric circle is the center circle and the third concentric circle is an outer circle.~~

3. (Currently amended) A wearable astrological identifier, said identifier comprising paper or plastic including a circular area printed with a first color, surrounded by a first circular annulus printed with a second color, surrounded by a second circular annulus printed with a third color, wherein the colors of said circular area and said first and second annulus are each chosen from a set of 12 colors representing the 12 signs of the zodiac, said button further comprising an attaching adhesive or pin suitable for attaching said identifier to clothing such that said identifier can be removed without damaging said clothing. ~~A color identification system based on astrological signs as~~

~~claimed in claim 1 wherein the resulting color form is used for comparison to another color form.~~

4. (Currently amended) The method of claim 1, wherein said first, second, and third color are chosen from a set of 12 colors representing the 12 signs of the zodiac. A color identification system based on astrological signs as claimed in claim 1 wherein the color form or multiple color forms are used for trading cards.

5. (Currently amended) The method of claim 4, wherein said 12 colors comprise: red, light green, bright blue, silver, yellow, dark green, light blue, black, orange, brown, dark blue, and lavender. A color identification system based on astrological signs as claimed in claim 1 wherein the system is used to play a game of determining color forms of many individuals.

6. (Currently amended) A method for automatically generating an astrological birth symbol for an individual, said method comprising:

storing within computer memory birth date and time data of an individual;

storing within computer memory a lookup table to derive astrological data based on birth date and time;

storing within computer memory color mapping tables mapping the 12 signs of the zodiac to 12 distinct colors;

automatically processing said birth date and time data using said lookup table, and automatically generating within computer memory a digital representation of a graphical image symbolic of astrological birth data of said individual, where said graphical image comprises:

a circular area of a first color, representing a first astrological datum of said individual, a first circular

annulus of a second color surrounding said circular area,
said first circular annulus representing a second
astrological datum of said individual, and a second circular
annulus of a third color surrounding said first circular
annulus, said second circular annulus representing a third
astrological datum of said individual;

wherein said first, second, and third colors are chosen
from a set of 12 colors symbolizing the 12 signs of the
zodiac.

~~A color identification system based on astrological signs as claimed in claim 1 wherein the color form or multiple color forms are made into stickers or button pins.~~

7. (Currently amended) The method of claim 1, wherein each
of said first astrological datum, said second astrological
datum, and said third astrological datum are mutually
exclusively representative of the sun sign, moon sign, and
ascending sign of said individual. A color identification
system based on astrological signs as claimed in claim 1
wherein the color form or multiple color forms are copied in
a repeating pattern onto paper as wrapping paper.

8. (Currently amended) The method of claim 6, wherein each
of said first astrological datum, said second astrological
datum, and said third astrological datum are mutually
exclusively representative of the sun sign, moon sign, and
ascending sign of said individual. A color identification
system based on astrological signs as claimed in claim 1
wherein the color form or multiple color forms are used as
computer screen savers.

9. (Currently amended) The method of claim 6, wherein each
of said first astrological datum, said second astrological
datum, and said third astrological datum are mutually
exclusively representative of the sun sign, moon sign, and

the astrological sign of a particular planet at the time of birth of said individual. A color identification system based on astrological signs as claimed in claim 1 further comprising using birth data information to determine the astrological sign of a planet at the place, time and date of birth in place of the ascendant information.

10. (Currently amended) The method of claim 1, wherein the colors of said circular area and said first and second annulus are chosen from the set of colors consisting of: red, light green, bright blue, silver, yellow, dark green, light blue, black, orange, brown, dark blue, and lavender. A color identification system based on astrological signs as claimed in claim 1 wherein four or more concentric circles are used to create the color form.

11. (Currently amended) The wearable astrological identifier of claim 3, wherein the colors of said circular area and said first and second annulus are chosen from the set of colors consisting of: red, light green, bright blue, silver, yellow, dark green, light blue, black, orange, brown, dark blue, and lavender. A color identification system based on astrological signs as claimed in claim 1 wherein the astrological signs are assigned the following colors:

TABLE-US-00002	Aires	Red	Taurus	Light Green	Gemini		
Bright Blue	Cancer	Silver	Leo	Yellow	Virgo	Dark Green	Libra
Light blue	Scorpio	Black	Sagittarius	Orange	Capricorn	Brown	Aquarius
		Pieces		Lavender
